

# Enhanced Filtering

## Establishment-tailored filtering for Internet and Email Content

Redstone's Enhanced Filtering service enables you to manage and control your use of the Internet and Email with a range of customisable features, giving you the freedom to determine for yourself what is acceptable content and what isn't.

The service provides your educational establishment with tailored filtering for Internet web access and Email to suit your individual filtering policy. The service is completely managed by Redstone's, but can be controlled by you through a unique and totally secure administration tool, which can be accessed through a standard web browser. This means that your school or college can modify and control what is filtered and what is permitted by:

- Allowing or excluding web sites (URL's)
- Customising Redstone's banned Email words list
- Allowing or excluding Email from particular Domain names

This means that any Email attachments will also be filtered according to your establishment's own specified set-up. Enhanced filtering will enable you to enforce the appending of standard text to all outgoing Email messages.

Redstone's Enhanced filtering is an additional service provided as an optional extra to Redstone's existing Centrally Managed Filtering package – a key feature of Redstone's NGfL Connect and ADSL Connect services. For more details about these products and services please see the following information sheets:

- Central Filtering for Internet Content
- NGfL Connect
- ADSL Connect

### Filtering - Features and Benefits

- ✓ **Centrally managed filtering:** Redstone's provide expert, no hassle management of the day-to-day use of the Internet in your establishment.
- ✓ **DDR monitors content and context of all web pages:** Dynamic Document Review (DDR) restricts access to a site depending on the contents of the page and the combination of words used, reducing the number of innocent sites blocked.
- ✓ **Virus checking of all Email attachments:** All Email messages and attachments are subject to anti-virus treatment. Outgoing mail is checked before being transmitted and incoming mail checked before being delivered.
- ✓ **SPAM protection:** Reduces unsolicited bulk 'junk' Email, saving you time and resources.

### Enhanced Filtering – Added Features and Benefits

- ✓ **Default allow and deny lists:** Default web access allow and deny lists can be updated as required ensuring the filtering matches the needs of your establishment
- ✓ **Administrator control:** Customise the Internet access filtering to suit your establishment's specific requirements – update and modify your filtering policy through our secure portal site.
- ✓ **Ban Email from specific sites:** All mail from an unsuitable site can be automatically barred if requested.
